

IV - E - 1

Plan of DBER Investigation

1. Have OGC consider propriety of conducting investigation of this kind.
2. Consult with an AEC historian about methodology of conducting investigation involving interviews with people many years after the events in question.
3. Examine ANL files of early reports and case records. These would include all of Pat Durbin's records, which were given to Bob Rowland, and additional information accumulated at ANL.
4. Examine any U. of Rochester records that are pertinent and may be made available.
5. Interview the following people:
 - a. Dr. Shields Warren
 - b. Drs. Stafford Warren, Christine Waterhouse and any other Rochester people involved in an important way, both early and late.
 - c. Physicians involved in U. of Chicago injections.
 - d. U. of California physicians who participated in the original study.
 - e. LASL personnel who participated in Wright Langham's early studies.
 - f. Current Center for Human Radiobiology personnel involved in study such as Drs. Rowland, Brues, Littman, Rundo, Evans.
 - g. Any others of interest whose names appear during the investigation.
6. Prepare complete report.
7. It must be recognized that a report that records the activities of others must detail AEC action and inaction. Otherwise, AEC will be accused of unjustly pointing the finger.
